

RewriteEngine On

Generate or serve a calendar based on its .in file

```
RewriteRule (.*)\.ics$ generate.rb?file=$1 [L]
```

For debugging purposes, allow a file to be fetched with a "plain" content-type

```
RewriteRule (.*)\.ics\.txt$ generate.rb?file=$1&send_plain=true [L]
```

View source if requested with no params

```
RewriteCond %{QUERY_STRING} ^$
```

```
RewriteRule generate\.rb$ - [H=default-handler,T=text/plain]
```

Alternative style: .rb.src extension

```
RewriteRule generate\.rb\.src$ $1.rb?view_source=true [L]
```

```
RewriteCond %{QUERY_STRING} view_source=true
```

```
RewriteRule generate\.rb$ - [H=default-handler,T=text/plain]
```
